

Software Requirements Specification (SRS)

ChariSmart

Purpose: This SRS defines the requirements for ChariSmart, a web-based surplus food redistribution network for donors, NGOs/orphanages, volunteers and admin.

1. Introduction

The system supports safe, verified and traceable redistribution of surplus food.

2. Overall Description

The product is a Flask web application with role-based dashboards and SQLite database.

3. Actors

Admin, donor, recipient NGO/orphanage, volunteer/rider and beneficiary.

4. Functional Requirements

FR-01 to FR-10 are detailed in the final report. Core requirements include registration, donation, request, approval, matching, assignment, delivery and expiry.

5. Non-Functional Requirements

Security, usability, reliability, maintainability, performance and portability.

6. External Interfaces

Browser interface, SQLite database and optional SMTP server.

7. Constraints

Prototype scope, SQLite local database, no real-time GPS in current version.

8. Acceptance Criteria

The system is acceptable when admin can verify users, approve donations/requests, create matches, assign volunteers and complete delivery workflow.
